Pressure Testing

State Service has the capabilities to conduct hydrostatic testing on any size pipeline or pipe system, from the smallest fabrication to cross-country mainlines, anywhere in North America. With a simple call or email, we can send out highly-trained hydrostatic testing crews.

State Service operators and equipment can perform multiple tests onsite simultaneously.

We provide our clients with the most detailed test documentation available.

We maintain both electronic and physical archives should copies ever be required. Each engineered test report includes digital imagery and GPS coordinates for all relevant pipeline features.

Our Pressure Testing Services

Fabrication

Bolt-up and torqueing, pigging facilities, valve settings, metering facilities, and temporary or permanent modifications to allow testing.

Chemical Cleaning

Progressive cleaning solutions using pigs and special chemicals to clean lines.

Line Fill, Test & Dewater

Late model, specially designed equipment allows pump performance to be matched to any project in the country.

Dehydration & Mechanical Cleaning

Drying to ultra-low dew point temperatures and cleaning lines to high-purity levels.
